

The Petit Screw Hanger

Better by design

- Made from .050" 5052-H32 tempered aluminum.
- Extra wide for extra strength.
- Special screws drive easier and hold better.
- Patented drive thru screwing for strength and economy.

Available in 5" & 6",
with the clip (as shown)
or without for
hemback gutter.

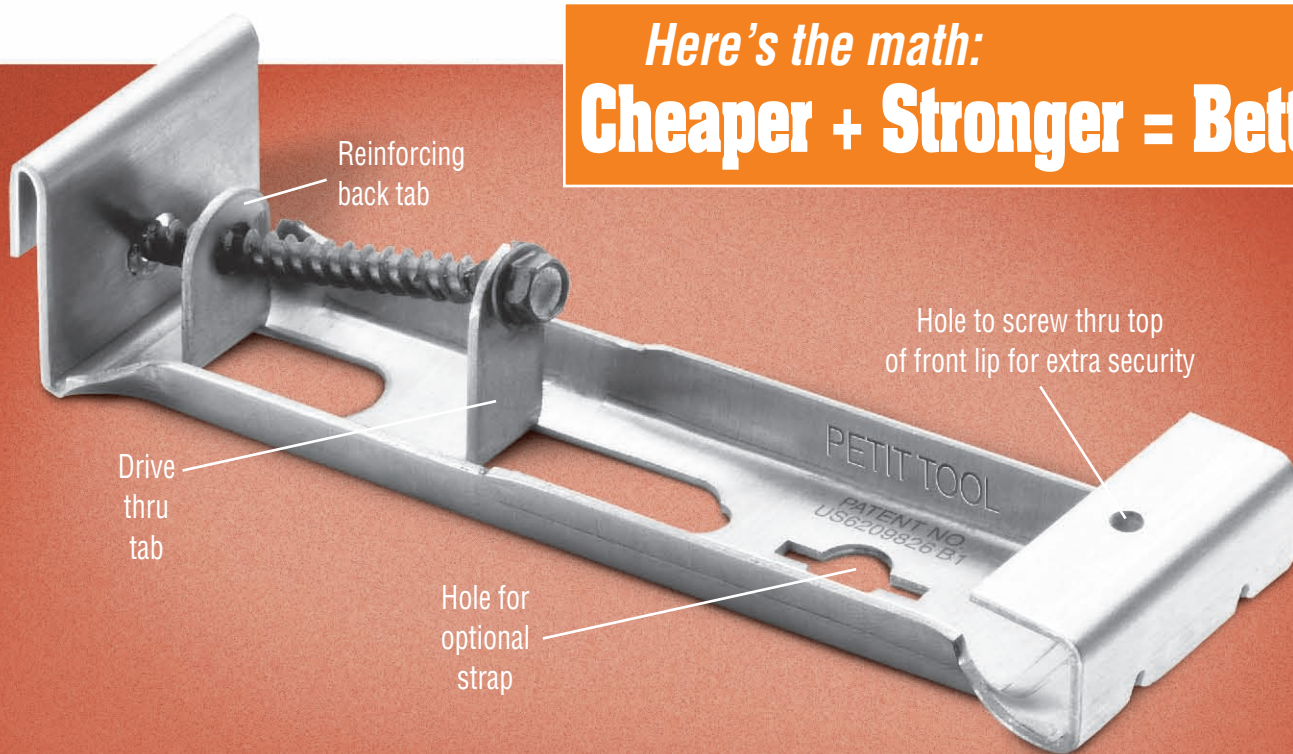

Why a screw hanger? Because they make hanging gutter easier when you've only got two hands. And you don't have to use them exclusively, every third or fourth hanger will permit you to set your pitch and use regular hidden hangers in between. Save time and expense.

What's so special about the Petit screws? Plenty—They're made right here in Bristol, CT, from 4037 alloy steel, thru hardened to RC 38-44, no offshore mystery metal in these babies. There's a radius under the heads so your power driver won't twist them off. The shanks are smooth with a faster pitch thread and special wax lube so you can drive 20% more per battery pack compared to the standard #10 sheet metal screw. And—guess what—most of you aren't hanging gutter on sheet metal fascia, so we used a more open furniture style thread design for better pull out resistance in wood. Finally, we spec'd super-heavy zinc plate so they'll last quarter til forever.

Patented what? Other screw hangers have extra metal and much longer screws; both add to costs without producing any benefits. Our patented drive thru screwing uses metal from the understressed middle of the hanger to form a tab that holds the screw for driving. When the screw is pulled up, it drives right thru the "U" in the outer tab and bends in the inner tab to buttress the back of the hanger.

Here's the math:

Cheaper + Stronger = Better
